DETAILED ACTION

Specification

1. Claim 34 objected to because of the following informalities:

"said comparison" in third line should change to "a comparison" to avoid lack antecedent basis.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 23, 26-29 rejected under 35 U.S.C. 102(b) as being anticipated by **Vernon** (US 4,695,823).

Regarding claim 23, **Vernon** discloses a tire monitoring system for a vehicle comprising:

a means (10) for receiving (from pressure sensor 16) and transmitting pressure data relating to a vehicle tire; and

wherein said receiving and transmitting means is adapted to determine a validity of said pressure data via testing by comparing it with a threshold value from resistor (29) using comparator (22) for detection of an out-of-range pressure signal, a valid

signal for transmitting to the data receiver/decoder (12) as seen in figures 1-3; col. 2, lines 10-68 and col. 3, lines 1-9 and 23-40 and col. 4, lines 40-53.

Regarding claim 26, **Vernon** discloses the means (10) receiving pressure signals from pressure transducer and transmitting them to data receiver/decoder (12). Thus, it is inherently a transponder.

Regarding claim 27, **Vernon** discloses said receiving and transmitting means is adapted to selectively transmit said pressure data if said pressure is valid (an out-of-range pressure) as seen in col. 3, lines 23-35.

Regarding claim 28, **Vernon** discloses a controller (data receiver/decoder 12) for receiving said transmitted pressure data from said receiving and transmitting means (10) as seen in figure 1; col. 2, lines 23-31.

Regarding claim 29, **Vernon** discloses said controller adapted to provide information via display (14) to a vehicle operator based upon said pressure data (out-of-range pressure data) as seen in col. 2, lines 23-31.

Allowable Subject Matter

4. Claims 30-35 allowed.
5. Claims 24-25 objected to as being dependent upon a rejected base claim 23, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Norman et al. (US 6181241) disclose a method of allocating transmitter of a tire pressure monitoring system of particular vehicle.

Starkey (US 6417766) disclose a method and apparatus for identifying remote sending units in a tire pressure monitoring system of a vehicle.
